

Flat Trays

Short Description:

Durable, food-safe flat trays available in aluminum, stainless, and aluminized steel with standard and customizable sizes for versatile commercial use.

Full Description:

Our flat trays are crafted from a variety of premium metals including aluminum, stainless steel, and aluminized steel. These trays are designed for strength, resistance to warping, and long-term durability, even under high temperatures. They come in all standard industry sizes and can also be customized for specific requirements. Smooth surfaces ensure easy cleaning and hygienic use. Raised edges prevent spills, while their flat stackable design optimizes kitchen storage. With superior heat conductivity and excellent resistance to corrosion, these trays are suitable for baking, roasting, grilling, chilling, and other professional kitchen tasks.

Specifications:

- Material Options: Aluminum, Stainless Steel, Aluminized Steel
- Standard Sizes: Compatible with common kitchen appliances and shelves
- Custom Sizes: Available upon request for specific needs
- Durability: Resistant to warping, rust, and corrosion
- Heat Conductivity: Efficient and even heat distribution
- Cleaning: Smooth surface for easy maintenance and hygiene
