

Toast Moulds

Short Description:

Durable aluminized steel toast moulds available in clustered or individual configurations, with steam-trapping lids for perfect browning and uniform results.

Full Description:

Our toast moulds are manufactured from high-quality aluminized steel, offering exceptional resistance to heat and corrosion. They are available in two configurations: clustered units that hold up to five moulds together, and single moulds for flexible, space-efficient use. Each version includes a removable lid that traps steam during baking, resulting in perfectly browned, evenly baked slices of toast. Engineered for durability, these moulds maintain their shape under high temperatures and regular use, making them ideal for bakeries and professional kitchens.

Specifications:

- Material: High-quality aluminized steel
- Heat Resistance: Excellent thermal performance for consistent baking
- Corrosion Resistance: Anti-rust properties for long-term use
- Configurations: Available in clustered (up to 5) and individual moulds
- Lid: Removable lids to trap steam for perfect browning
- Durability: Resistant to deformation and mechanical wear
- Application: Ideal for professional bakeries and commercial kitchens
